Medical Oncology is a service provided by a team that consists of Medical Oncologist's and Oncology Nurses. This team plays an important role in the care of cancer patients by providing education to the patients and their families about various forms of cancer and the temporary side effects of cancer treatment.

Chemotherapy is a systematic treatment for cancer. The side effects can vary depending on the chemotherapy regimen received. Throughout treatment, cancer survivors are closely monitored by the healthcare team.

On Virginia Oncology Associates' webpage "[Disease Information](#)", you will find disease specific information. Read about types of cancer, blood cancers, glossary of terms, drug dictionary, cancer prevention, cancer resources and cancer FAQ's.
